Summary

XeroBank is a communications security firm that has cornered the market on the rarest commodity in the world : online privacy. We specialize in communication solutions that protect our clients from all eavesdroppers.

Who We Are

XeroBank is a brand operated by Xero Networks AG, a firm strategically incorporated in the Republic of Panama. Our team includes the lead programmers of the most popular open-source anonymity software including xB Browser, with over 15 million downloads, the wildly successful virtual privacy adapter JanusVM, and the pioneers behind most advanced anonymity network in the world.

What We Do

We offer high-speed anonymity services, including encrypted email, to clients worldwide. Clients connect to us through VPN, and have their traffic routed across our gigabit backbone network where it hops from country to country, mixed with tens of thousands of other users, creating a virtually untraceable high-speed anonymity network. Our services are accessed through an online subscription, billed monthly, and available for all major operating systems.

Our Philosophy

Our vision is to protect and foster the development of liberty and free-trade markets by empowering our clients to control how their information is exposed and used. XeroBank's mission is to offer premier security services that empower data protection and provide peace of mind. The trust of our clients is our most valuable asset. Therefore, our commitment to client confidentiality is our highest value.

Our Philanthropy

When we aren't busy staying ten steps ahead of surveillance technology, we are behind the scenes securing communications for reporters at the Chinese Olympics, keeping dissident bloggers safe in Burma, and actively participating in anti-censorship movements in Iran. We view self-determination and free speech as the foundation for free societies, and we donate our abilities where we have an opportunity to empower those who can make a difference, especially to those who are speaking out.

Meet Us

XeroBank team members can be found all over the world. We will be hosting an event at the DefCon convention in Las Vegas in August, presenting at the IPCybercrime Bootcamp in September, and speaking at the ISS World conference in Washington DC in October. We encourage you to attend, and any of our team members would be happy to meet with you.

Frequently Asked Questions

Why do I need XeroBank?

Your online activities are being monitored by multiple agencies in and outside of your own country. These agencies can see every website you visit, your personal emails, your political inclinations, sexual preferences, purchasing habits, and can even predict your future behaviors. This world of increasing surveillance threatens the freedom and autonomy of children, citizens, and societies by invisibly invading our online privacy. XeroBank eliminates these threats through our advanced anonymity network.

How does XeroBank work?

Your computer connects to our network, and we encrypt and anonymize all of your internet traffic to defeat hackers, eavesdroppers, and surveillance systems. This is done by routing your traffic across our international high-speed network of FIPS-140 military-grade secure nodes, ensuring that your origination and destination nodes are never within the same country.

How is XeroBank different than other providers?

Most providers are the same. They use single hop systems or untrusted nodes, creating a slow or low-integrity network. XeroBank's network is a multi-hop, multiplexed network, entirely controlled by XeroBank. This unique design provides the strength to defeat external threats such as domestic surveillance while avoiding design flaws that create internal threats.

Why should I trust XeroBank?

XeroBank is designed for the paranoid. We are incorporated outside of US, UK, and EU jurisdiction, and have our financial, administrative, and operational functions segregated across multiple entities. This presents a serious hurdle to external parties trying to coerce XeroBank, while creating a robust structure that prevents internal threats. XeroBank does not log, and is unable to discover the originating source of traffic in our own network due to one-way cryptographic operations in our authentication system. XeroBank is operated by cryptographers, privacy professionals and anonymity experts. We have never surrendered the identity of a client or their traffic in nearly a decade of operation, and we never will.

How can I get XeroBank?

Visit XeroBank.com and sign up. Press members, bloggers, and non-violent dissidents are entitled to free XeroBank services under our anti-censorship initiative.

How can I contact XeroBank?

Visit XeroBank.com.
